WHOLESALE WATER SOLUBLE CBD

Bio CBD Powder: A proprietary nanoparticle formulation is the highest bio-available, longest shelf-stable CBD powder in the market. It can be used in many delivery forms similar to those in the pharma/nutraceutical arena. Bio CBD is developed by an experienced scientist at a leading research/manufacturing organization and formulated into a microencapsulated powder in a cryoprotectant matrix containing 10% CBD, a bio enhancer, and certain GRAS excipients.

Bio CBD Liquid: A proprietary formulation is the highest bio-available, longest shelf-stable CBD liquid in the market. This tasteless and clear liquid is best used in a tincture or added to a variety of beverages. The formulation of the final product allows rapid active substance delivery with the expectancy of high absorption.

Spray Dried Advantage: Spray drying is a technology facilitating the production of nanocapsule powders with very precisely defined advanced properties and is well-established in the chemical, food, and pharmaceutical industries. The spray drying technique produces CBD powders of controllable particle size and overall quality which allows for optimal absorption by the body. Nanocapsules, which are submicron in size, reach the target and release the encapsulated drug without deterioration of taste or nutritional value.

-  **INCREASED BIOAVAILABILITY**
-  **EXTENDED SHELF LIFE**
-  **LOWER DOSE REQUIRED**
-  **MAXIMUM RESULTS**
